Flash Media Server plays right along with the iPad. You can take a video or photo, upload it into the app, open it and manipulate it as you would a photo -- then save the changes back to the server. This means you can easily provide clients and employees with compelling, multimedia content via the Apple TV while you work on other projects. You can also stream your videos. Related to Viewer and Layout are editing. If you're a freelancer, you can work on the client's photo, then send them the edited file and ask for feedback. You can also use the image editor to create your own art. You can choose from a number of presets or create your own brushes, filters and layers. You can also use Layers as guides. Layers can be stacked or arranged one on top of the other. There are also guides tiles to help you create guides in Photoshop. Layers can be lock while in editing mode. You can switch to and from editing mode and resume editing from the last editing session. Adobe Photoshop Review When I mention the word canvas, I mean the large design board where you create the photo. It can be anything from the very small (**with a 9.7" screen**) to the massive (**with a 13.3" screen**). But the canvas is where you start your art work. The canvas is what you see in the viewer when you select a photo. So, if you're working in a large format, you're going to want a larger canvass. You can save edits or even change the size of the canvas. If you're on a small iPad, you may want to start with a smaller canvas. The iPad Pro camera can be used to make adjustments to your photos. It's great for portraits, animals and stuff.
